HydroOpsLM

One policy per reservoir

Rule-based operation

User operating rules

Current inflow
+ beginning storage
/ pool

LLM modules

Optional knowledge

Prompt
Available information
+ operating instructions

Language model

Operation proposal
Requested release
+ rationale

Response checks
Completeness
fields / units / values

Operation audit
Configured operating criteria

Trace records
Prompt, reply, check, execution

Rule release

Current inflow

Beginning storage / pool
+ implemented
release history

Release request

Checked release

Native HydroCNHS

Rainfall-runoff
GWLF / ABCD

Upstream routing
Lohmann

Reservoir operation
via native Dam API

HydroOpsLM adds:
storage balance
release + spill

Implemented outflow

Downstream routing
Lohmann

Downstream discharge
